Applications

The 3103 gas valve is a stainless steel valve capable of metering gas flow between 23 and 18 144 kg/hr (50 and 40 000 lb/hr). It is designed to be corrosion resistant and self-cleaning, allowing it to operate in sour gas environments (high sulfur content gas) that can cause problems for other valves. When used in conjunction with an EM35MR1 actuator and EM 24 V digital driver, the 3103 valve delivers the demanding accuracy needed for DLE applications.

The EM35MR1 actuator is all electric, so hydraulic contamination and maintenance problems are eliminated. Cost is reduced since there is no HPU to maintain or replace. In addition, the EM35MR1 actuator is designed for long life, although it may be replaced in the field if necessary.

Description

The 3103 gas valve is a rotary sleeve-and-shoe type throttling valve. The metering port area is determined by input shaft position from the actuator. Valve position feedback to the actuator driver is accomplished using a high accuracy resolver. The EM35MR1 actuator is designed for use with the EM 24 V digital driver. The motor is a brushless dc motor with a motor clutch and gearhead assembly. The motor uses Samarium Cobalt permanent magnets bonded and sleeved to the rotor element. Rotor position sensing is performed through the use of a resolver.

Features

The EM35MR1 motor assembly is housed in a cast aluminum, explosion-proof housing. A thermal potting compound is used to transfer heat generated by the motor to the cast housing and out to the ambient environment. The motor output shaft is directly coupled to the valve input shaft through the use of a stainless steel torsional coupling.

EM24 Digital Driver

The driver contains an analog position controller that receives a demand signal via a 4–20 mA input. The feedback signal is generated by a brushless resolver that is mounted on the fuel metering valve. The driver contains fault detection circuitry which provides the status of the 4–20 mA interface, position controller, driver, and feedback to the shutdown logic. A fault condition or an external shutdown command will disable the output (removing power to the motor), which in turn causes the valve return spring to close the valve.

This driver, designed for use with a Woodward NetCon® or MicroNet™ control system, consists of a real-time SIO and a driver. The real-time SIO and the digital driver exchange information over a serial communication line. The digital form of the data preserves the 16-bit feedback resolution necessary to meet the system accuracy requirements. The real-time SIO is configured during the system initialization with data selected off-line by the GAP™ (Graphical Application Program) software.
3103 Gas Valve Specifications

SUPPLY CHARACTERISTICS

Contaminants
Solid particles
<10 µm diameter 30 ppm by volume maximum
>10 µm diameter 0.3 ppm by volume maximum

Metered Fuel Types
Natural, propane, methane service

Specific Gravity
0.5 to 1.05

Temperature
–40 to +149 °C (–40 to +300 °F)
–29 to +149 °C (–20 to +300 °F) (restriction for CE Marking)

GAS FLOW REQUIREMENTS

Inlet Pressure
6206 kPa (900 psia) maximum
4964 kPa (720 psia) maximum (restriction for CE Marking)

Pressure Differential
172 to 6206 kPa (25 to 900 psi)

Gas Flow Range
23 to 18 144 kg/hr (50 to 40 000 lb/hr) (0.6 sp gr) maximum
flow capacity is dependent upon available gas conditions

Accuracy Standard
+5% of point, or +0.25% of maximum flow, whichever is larger

High Accuracy Dry Low Emissions Applications
2% of point (consult Woodward)

EM35MR1 Actuator

MECHANICAL
Output Shaft Rotation
60° (rotation limited by valve stops)

Continuous Output Torque
+24.86 N·m (+220 lb-in) maximum

Peak Output Torque
+62.38 N·m (+552 lb-in) minimum

ELECTRICAL
Power Input
28 Vdc nominal
18–32 Vdc operating

Current
37 A, maximum for 20 ms
15 A, maximum continuous

PERFORMANCE
Slew Rate
125 ms to open the valve and 120 ms to close the valve
(internal spring adding) at a nominal line voltage of 28 Vdc

Bandwidth
>5 Hz

Position Accuracy
0.50° analog
0.10° digital

Regulatory Compliance

European Compliance for CE Marking:
These listings are limited only to those units bearing the CE Marking. Compliance with the European regulations is the result of compliance of the individual components:

EM 24 V Digital Driver: DEMKO 02 ATEX 152309

EM Resolver: LCIE 02 ATEX 6141 X

EM35MR1 Actuator: LCIE 02 ATEX 6140 X

Special Conditions for Safe Use:
Operating ambient temperature from –29 to +149 °C (restriction for CE Marking).
Use supply wires suitable for a maximum ambient temperature of +149 °C.
The Minimum Position Switch option is not available for use in an ATEX environment.

Other European Compliance:
Compliance with the following European Directives or standards does not qualify this product for application of the CE Marking:

North American Compliance:
Suitability for use in North American Hazardous Locations is the result of compliance of the individual components:

EM35MR1 Actuator: CSA Certified for Class I, Division 1, Groups C & D. For use in Canada and the United States.

EM Resolver: CSA Certified for Class I, Division 1, Groups C & D. For use in Canada and the United States.

Minimum Position Switch: CSA Certified for Class I, Division 1, Groups C & D. For use in Canada.
